METHOD AND APPARATUS FOR AUTOMATED MEETING SCHEDULING USING DELEGATES, REPRESENTATIVES, QUORUMS AND OTHER TEAMS

Abstract of the Disclosure

5   A method, meeting scheduler and computer program product are provided for automated meeting scheduling using delegates, representatives, quorums, and teams. Meeting settings and invitees data are stored for a meeting. The meeting settings and invitees data includes invitee attendance type, delegates, representatives, quorums, and teams data. A solution time block for automated meeting scheduling including at least a subset of a plurality of selected invitees is identified utilizing the invitee attendance type, delegates, representatives, quorums, and teams data. A selection score is calculated for each potential time block for automated meeting scheduling utilizing the stored meeting settings and invitees data including the invitee attendance type, delegates, representatives, quorums, and teams data. The solution time block for automated meeting scheduling including a subset of a plurality of selected invitees is identified utilizing the calculated selection score.
